AgroView Winter 2008 Campaign

Do you want to:

- **Increase Productivity**
- **Reduce Inputs**
- **Improve Nitrogen Management**
- **Increase your profits**

Following successful winter and summer trials, the AgroView crop monitoring service is now being offered as a subscription service to growers, cooperatives, consultants and researchers during the winter of 2008. (See *AgroView Flyer for technical details*).

2008 Subscription Service

The Agroview crop monitoring service will be available from late July 2008. Users simply need to supply Terrabyte Services with details relating to:

- **Farm location**
- **Paddock location and names**
- **Dominant soil type**
- **Crop type and variety**
- **Target plant population, &**
- **Preferred Growth Stage for imaging**

You can supply GPS coordinates or maps of your paddocks, or Terrabyte Services will use existing satellite imagery to locate your paddocks with a little assistance.

Each satellite image covers 60 x 60km, so we need to group orders on a regional basis. In discussion with growers and consultants imaging "windows" will be selected, and clients will be informed weekly of imagery status

Once the imagery has been captured, products will be processed and placed on a password protected web site. Clients will be notified when products are ready, and issued with a password.

Products can be supplied as:

- Digital colour maps (pdf) ready for printing on your home colour printer
- Spatially referenced digital images, or shape

files for use within most popular GIS software packages

- Digital files ready to load into your GPS.

Packages

In addition to on-going service development, during 2008 a LAI product will be available. Nitrogen uptake and tiller density products will be available subject to preliminary validation activities, and subscribers being able to provide a small amount of information on crop and soil status throughout the growing season.

Basic:

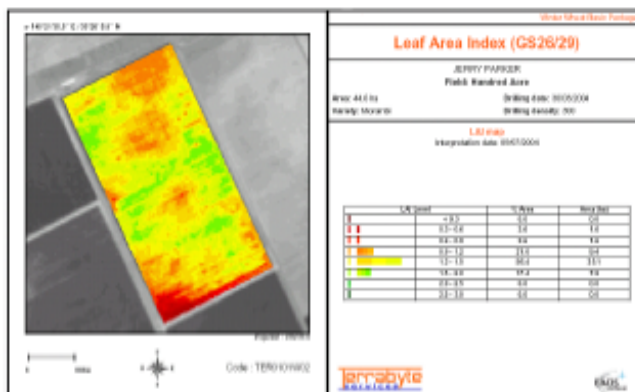

- **Leaf Area Index estimate at paddock and farm level**

Advanced

- **Nitrogen Uptake**

Under Development

- **Tiller density**
- **Nitrogen budgeting and risk management**

Pricing and Orders

Give the highly variable seasonal conditions from region to region, pricing for 2008 will depend on the number of hectares being ordered within a region. Please contact us for a tailored package and pricing, and product order form.
